Manager since September 2019

Portfolio objective

Selecting funds that place an emphasis on ethical investment criteria whilst providing a long term capital return in excess of the UT Mixed Investment 40%-85% Shares Retail sector.

Investment approach

Funds are selected by applying a filter to identify those that meet our strict ethical criteria. The objective is achieved by using a balanced investment approach, gaining exposure to a number of different asset types including shares and bonds across a broad range of international markets. The performance of all the funds in the portfolio is constantly monitored and formally reviewed on a quarterly basis by our investment committee.

Portfolio manager's commentary

Ethical and sustainable investing continues to face the challenges that have dominated the sector since the start of the year, with the elements that powered the theme to a strong 2020/21 facing a reversal as markets respond to the realities of rising interest rates. While the technology sector, a favourite area for this style of investing, has seen share price tumble, rising commodity prices have led to record revenues for oil companies creating an obvious headwind for the portfolio.

In order to improve the overall diversification of the portfolio, we have introduced two new holdings this quarter as part of a broader asset allocation change that saw the allocation to European equities reduced in favour of Global equities. Full details of the changes being recommended are outlined on the Fund Changes summary which is available on our website.

Past performance is not a guide to future performance. The value of investments and any income from them may fall as well as rise; you may get back less than the amount invested. Higher volatility investments are subject to sudden and large falls in value and could result in a loss equal to the sum invested. Certain investments (e.g. property) are not readily realisable and investors may experience difficulty in realising the investment or in obtaining reliable information on the value or associated risks. Changes in rates of exchange may have an adverse effect on the value, price or income of investments denominated in currencies other than Sterling.
